# ARYAN SINGH

**B.Tech CSE | Software Development | AI & Full-Stack**

Greater Noida, Uttar Pradesh, India | aryansingh7052606404@gmail.com | LinkedIn | GitHub

## PROFESSIONAL PROFILE

Computer Science undergraduate with hands-on experience building web products, AI-agent concepts, and frontend applications through hackathons and personal projects. Strong interest in software engineering, full-stack development, problem solving, and practical AI systems. Currently strengthening Java, Data Structures & Algorithms, and modern web development skills while building and deploying real-world projects.

## EDUCATION

**GL Bajaj Institute of Technology & Management, Greater Noida** | B.Tech in Computer Science & Engineering | 2025–Present
**Class XII — PCM:** 85% | **Class X:** 88.5%

## TECHNICAL SKILLS

**Programming Languages:** Java, Python, C, JavaScript
**Core CS:** Data Structures & Algorithms, Object-Oriented Programming, Recursion, Arrays, Strings, Searching, Sorting
**Web Development:** HTML, CSS, JavaScript, React.js, Node.js, Express.js, REST APIs
**Database & Tools:** PostgreSQL, Git, GitHub, VS Code, Figma, Vercel
**Development Practices:** Problem Solving, Debugging, Version Control, Responsive UI Development, Rapid Prototyping
**Interests:** Software Engineering, Full-Stack Development, AI Agents, Agentic AI, Product Development, UI/UX

## PROJECTS

**ScamShield Bharat — Evidence-First Financial Scam Verification Platform** | *React.js* | *Node.js* | *AI* | *Web Application*

- Built a domain-focused platform that analyzes suspicious financial messages, screenshots, and web links to help users identify potential scams.
- Designed an evidence-first verification workflow that compares suspicious claims against official regulatory information instead of relying only on generic AI responses.
- Implemented multiple input modes and structured risk-focused results to make complex verification findings easier for users to understand.
- Developed a clean product experience around evidence, verification status, risk indicators, and actionable explanations.
- Deployed the application to Vercel and maintained the codebase using Git/GitHub.

**EduPath — Personalized Learning & Skill Gap Agent** | *Agentic AI* | *Product Development* | *Hackathon*

- Designed an AI-agent based learning system that identifies learner skill gaps and generates personalized learning paths.
- Developed the concept of an intake diagnostic calibrator to understand learner requirements before generating recommendations.
- Designed a closed-loop adaptive replanning engine that can adjust learning paths based on learner progress and changing requirements.
- Introduced auditable decision receipts to make AI-generated recommendations more transparent and easier to review.
- Contributed to product architecture, user experience, interface design, and agent workflow planning.

## HACKATHONS & PRODUCT-BUILDING EXPERIENCE

**TechZephyr 4.0 — Web Hackathon, IIT Bhubaneswar** — Participated in a competitive web-product hackathon focused on rapid ideation, implementation, product presentation, and working prototypes.

**Product Space / Agentic AI Hackathon** — Worked on EduPath, contributing to the AI-agent workflow, product architecture, UI/UX decisions, and overall product direction.

**WebRush — 6-Hour Frontend Hackathon** — Built and presented a frontend product under a strict time constraint, emphasizing rapid implementation, interface quality, and responsive design.

## PROBLEM SOLVING & DEVELOPMENT

- Practicing Java for software development and placement preparation, with emphasis on clean logic and object-oriented programming.
- Actively solving LeetCode and algorithmic problems involving arrays, strings, recursion, searching, sorting, mathematical operations, and basic optimization.
- Building programming fundamentals through structured practice in loops, functions, arrays, strings, recursion, and problem decomposition.
- Using Git and GitHub to organize source code, maintain projects, and document development work.
- Interested in transforming ideas into usable software through rapid prototyping, iterative development, and product-focused engineering.

## CORE STRENGTHS

Problem Solving | Rapid Learning | Product Thinking | UI/UX Awareness | Team Collaboration | Hackathon Development

## AREAS OF INTEREST

Software Engineering | Full-Stack Development | Artificial Intelligence | Agentic AI | Data Structures & Algorithms | Web Development
